TITLE : OPTICAL DISK

ABSTRACT : PROBLEM TO BE SOLVED: To improve mechanical strength by laminating a first disk plate having a substrate with a second disk plate made of a polycarbonate containing either a carbon fiber or a glass fiber.

SOLUTION: A DVD 1 is produced by laminating a reproducing disk plate 2 having a polycarbonate substrate 4 with an sub-disk plate 3 made of a polycarbonate, containing at least either a carbon fiber or a glass fiber. In this case, rigidity of the second disk plate is improved, compared to the conventional DVD having a sub-disk plate made only of a polycarbonate, and therefore, the whole mechanical strength is improved.
